

Premier Power-Ups: Kony Developer Bootcamp

Your Goal

Faster adoption and skills development learning the Kony platform's capabilities via hands-on labs

Description

Learn how to effectively use Kony Visualizer (formally Kony Studio) to develop multi-channel applications for smartphones, tablets, desktop, and wearables. Kony Developer Bootcamp covers everything from using widgets, services, and the Kony API to server-side development to extending the application through Kony's Foreign Function Interface. This course is designed to immerse students in the technology in a format that consists of over 50% hands-on development time.

What It Does For You

- Prepares your team to work with the Kony platform

Requirements

- Familiarity with today's mobile devices, web technologies, and web development
- Current software development skills (e.g. recent Java or C# programming) including a working knowledge of JavaScript

How It Powers Up Your Implementation

Discovery

- Learn from the source (hint: Kony experts)

Engagement

- Faster implementation with fewer bugs
- Fewer issues and setbacks
- Take a certification exam to prove knowledge gained

Outcomes

- Trained and Certified resources working on your projects (reduces risk, improves ROI, and increases success)
